

Update Email 5 (Feb. 25, 2010)

Here's a fast neuro-update.

The third and final "embolization" procedure (catheter application of glue-like substance to reduce malformation's size and flow) happened last week. Again the result was a very good outcome without complications. With those procedures now completed we are 'go' for surgery to remove the malformation on March 8.

Further excruciating detail is attached in the form of a new Gazette. We are doing well and looking forward to the next and hopefully final step.

All best,

bb
